THE INFORMED INVESTOR

A Timely Analysis of MicroGroup/Sector Trends for the Professional Investor

This publication is designed for professional investment managers. It comprises market information from the Piper Sandler *War Plan* and *MicroGroup* Charts.

Piper Sandler does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decisions. This report should be read in conjunction with important disclosure information, including an attestation under Regulation Analyst Certification, found at the end of this report or at the following site: http://www.pipersandler.com/researchdisclosures.

Analyst Certification – Craig W. Johnson, Senior Research Analyst: The views expressed in this report accurately reflect my personal views about the subject company and the subject security. In addition, no part of my compensation was, is, or will be directly or indirectly related to the specific recommendations or views contained in this report. Piper Sandler research analysts receive compensation that is based, in part, on the firm's overall revenues, which include investment banking revenues.

Affiliate disclosures: Piper Sandler is the trade name and registered trademark under which the corporate and investment banking products and services of Piper Sandler Companies and its subsidiaries Piper Sandler & Co. and Piper Sandler Ltd. are marketed. This report has been prepared by Piper Sandler & Co. and/or its affiliate Piper Sandler Ltd. Piper Sandler & Co. is regulated by FINRA, NYSE and the United States Securities and Exchange Commission, and its headquarters are located at 800 Nicollet Mall, Minneapolis, MN 55402. Piper Sandler Ltd. is authorized and regulated by the Financial Conduct Authority, and is located at 88 Wood Street, 13th Floor, London EC2V 7RS. Disclosures in this section and in the Other Important Information section referencing Piper Sandler include all affiliated entities unless otherwise specified.

Piper Sandler's technical and quantitative products are based on different methodologies, may contradict the opinions contained in fundamental research reports, and could impact the price of the subject security. Recommendations based on technical and quantitative analysis are intended for the professional trader, while fundamental opinions are typically suited for the longer-term institutional investor.

Other Important Information: The material regarding the subject company is based on data obtained from sources we deem to be reliable; it is not guaranteed as to accuracy and does not purport to be complete. This report is solely for informational purposes and is not intended to be used as the primary basis of investment decisions. Piper Sandler has not assessed the suitability of the subject company for any person. Because of individual client requirements, it is not, and it should not be construed as, advice designed to meet the particular investment needs of any investor. This report is not an offer or the solicitation of an offer to sell or buy any security. Unless otherwise noted, the price of a security mentioned in this report is the most recently available market closing price. Piper Sandler does not maintain a predetermined schedule for publication of research and will not necessarily update this report. Piper Sandler policy generally prohibits research analysts from sending draft research reports to subject companies; however, it should be presumed that the fundamental equity analyst(s) who authored this report has had discussions with the subject company to ensure factual accuracy prior to publication, and has had assistance from the company in conducting diligence, including visits to company sites and meetings with company management and other representatives.

Notice to customers: This material is not directed to, or intended for distribution to or use by, any person or entity if Piper Sandler is prohibited or restricted by any legislation or regulation in any jurisdiction from making it available to such person or entity. Customers in any of the jurisdictions where Piper Sandler and its affiliates do business who wish to effect a transaction in the securities discussed in this report should contact their local Piper Sandler representative, or as otherwise noted below. Canada: Piper Sandler & Co. is not registered as a dealer in Canada and relies on the "international dealer exemption" set forth in National Instrument 31-103 – *Registration Requirements, Exemptions and Ongoing Registrant Obligations* of the Canadian Securities Administrators. This research report has not been prepared in accordance with the disclosure requirements of Dealer Member Rule 3400 – Research Restrictions and Disclosure Requirements of the Investment Industry Regulatory Organization of Canada. Europe: This material is for the use of intended recipients only and only for distribution to professional and institutional investors, i.e. persons who are authorised persons or exempted persons within the meaning of the Financial Services and Markets Act 2000 of the United Kingdom, or persons who have been categorized by Piper Sandler Ltd. as professional clients under the rules of the Financial Conduct Authority. United States: This report is distributed in the United States by Piper Sandler & Co., member SIPC, FINRA and NYSE, Inc., which accepts responsibility for its contents. The securities described in this report may not have been registered under the U.S. Securities Act of 1933 and, in such case, may not be offered or sold in the United States or to U.S. persons unless they have been so registered, or an exemption from the registration requirements is available.

This report is produced for the use of Piper Sandler customers and may not be reproduced, re-distributed or passed to any other person or published in whole or in part for any purpose without the prior consent of Piper Sandler & Co. Additional information is available upon request.

RUSSELL Up Some Winners | SPX YE 5,800

TECHNICAL TAKEAWAYS:

- The combination of a well-telegraphed shift in Fed policy, normalization of the yield curve, and a shift in market leadership suggests that investors should turn their focus toward SMID-cap stocks—those small- and mid-cap companies often underappreciated but with significant growth potential—to "RUSSELL Up Some Winners!"
- We believe now is the time for SMID-cap stocks to outperform for several reasons:
 - The improving breadth of equity markets looks similar to 2012/2013 when the Piper Sandler MicroGroup Index (Unwtd) reversed an 18-month downtrend. The Russell 2000 index appreciated 37% in 2013, outpacing the major averages, and we could see history repeat itself.
 - S&P equal-weighted index (SPW) leads the S&P market-cap index (SPX) into all-time highs.
 - The primary trend in the major indices remains up, with the DJIA and SPX hitting record highs.
 - The Magnificent Seven stocks have lagged the broader market's performance since mid-July a shift in leadership that often occurs when interest rates and the macro environment change.
 - Three months after the Fed's first rate cut after a tightening cycle, value stocks outperformed.
 - Historically, when the 10/2's inverted yield curve normalized, equity markets incrementally rose over the next 4/13/26/52 weeks, led by the Healthcare and Technology sectors.
 - Small-cap value stocks, especially among Financials, tend to outperform from September through December during election years.

RECOMMENDATIONS/MODEL TAKEAWAYS:

- No change to our SPX year-end price objective at 5,800.
- No sector recommendation changes.
- Model Changes: Based on our trend and relative strength work, we made the following changes:
 - o Adds: ABCB, ALKT, ENB, FRPT, GOLD, HBAN, MNDY, MUSA, SITM
 - o Deletes: AAP, CDNS, CRBG, DIS, HCC, INTU, MLM, PPC, PSTG, SCHW
- Piper Sandler Technical Opportunities Portfolio YTD performance: +17.71%

RUSSELL Up Some Winners | SPX YE 5,800

Large-cap stocks, specifically the Magnificent Seven stocks (NVDA, MSFT, AAPL, AMZN, META, and TSLA), have dominated the investment narrative over the past several years. However, the weekly charts of these companies are now starting to mark time on an absolute or relative basis—which suggests that while they still may be great companies, they may not be great stocks.

The combination of a well-telegraphed shift in Fed policy, normalization of the yield curve, and a shift in market leadership suggests that investors should turn their focus toward SMID-cap stocks—those small- and mid-cap companies often underappreciated but with significant growth potential—to "RUSSELL Up Some Winners." Historically, investors have sifted through the Russell 2000, 2500, 3000, or S&P Small-/Mid-cap indices to identify "Small (SMID and MID), But Mighty stocks."

This month's Informed Investor publication lays out compelling technical evidence for why we believe now is the time for SMID-cap stocks to outperform. So, keep reading, and let's "RUSSELL Up some Winners!"

SPX Equal Weight Leading:

The S&P Equal Weight Index (SPW) has broken out to a new all-time high, while the SPX Weighted Index (SPX) has not.

This suggests that market participation is starting to expand beyond just the Magnificent Seven stocks. We continue to view this as a bullish sign for equity markets.

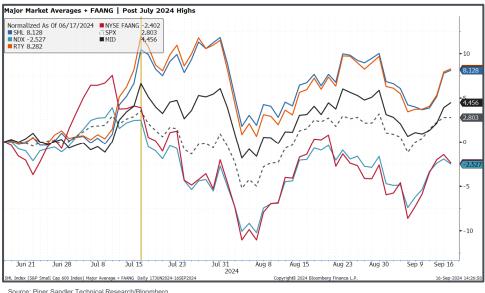

Source: Piper Sandler Technical Research

SMID-Cap Stocks Leading:

Market leadership has shifted down-cap toward SMID-cap stocks over the last several months. The chart to the right depicts the rotation, with FAANG stocks leading into the mid-July '24 highs and then MID-cap stocks (SML, MID, and RTY) outperforming afterward.

This sort of "Style Shift" would be consistent with prior Fed rate cuts dating back to the late 1980s (see this month's Fed rate cut study).

Improving Market Breadth:

The improving breadth of equity markets looks similar to 2012/2013 when the Piper Sandler MicroGroup Index (Unwtd) reversed an 18-month downtrend. That reversal corresponded with the SPX breaking above the prior 2000/2007 highs.

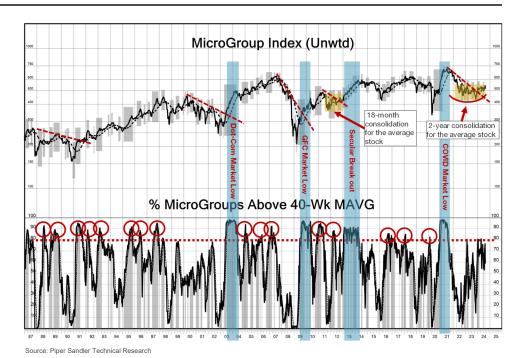

The Russell 2000 index appreciated 37% in 2013, outpacing the major averages. While history may not repeat itself, SMID-cap stocks could be poised to outperform if it does rhyme.

Yield Curve Steepening=Bullish:

The 10/2's yield curve has been inverted for over two years—its longest and widest since 1980.

Expectations are for the Fed to cut interest rates at least once this year, normalizing the yield curve.

The table below shows which market sectors typically "lead or lag" after a yield curve normalization.

Major Indices | Major Trend is Higher:

S&P 500: The recent weakness in the SPX proved to be just a pullback within the context of a longer-term uptrend.

The SPX is at an all-time new high and its primary uptrend remains intact.

Dow Jones Industrial Average: The "Blue Chip" index has recently reached an all-time high of 10.4% year-to-date.

Its bull cycle remains intact above key support around the 36,000 level.

Nasdaq Composite: The tech-heavy index is 5.5% off its record high and is up 17.5% year-to-date.

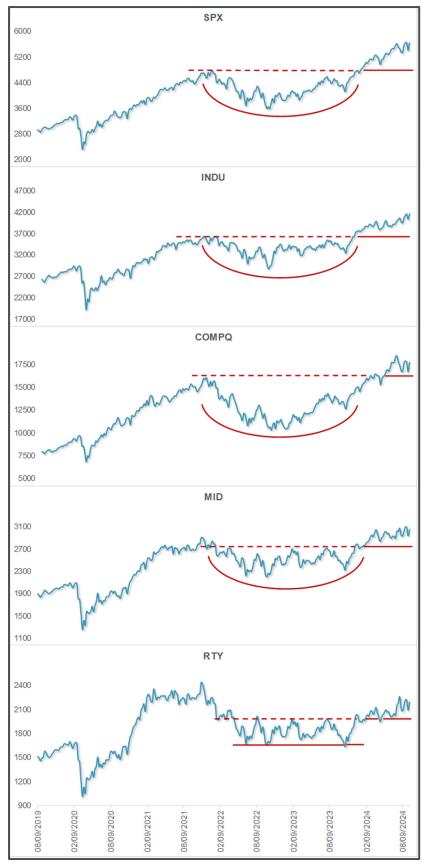

The key support area to watch is 16,000, the price around the previous years' highs.

S&P 400 Mid-cap: The index has successfully retested support and remains in a well-defined uptrend in our work.

It is up more than 10% year-to-date and is above a rising 50-/200-day MA.

Russell 2000 Small Cap: The index has broken out of a multi-year consolidation range and is above its rising 50-/200-day MA.

The RUT is 10.2% off its all-time highs.

Macro Meets Micro & Technical:

To identify the most actionable SMID-Cap stocks in the Russell 2000 index (RUT), we collaborated with the Portfolio Strategy team and their <u>Strategy Portal</u> to screen the RUT on the two most important factors driving the index—Free Cash Flow Yield and ROE.

These two factors narrowed the list of attractive stocks to 151 from 2,000. We then built a *Weekly Homework Grid* to identify stocks with a bullish technical setup.

Please click the links below to see all our Weekly Homework Grids or the full suite of factors from the Portfolio Strategy team.

*Tickers with a red box denote a bullish trend phase/stock

2024

SMID-Cap's Outperform During Election Years:

Since 1980, small-cap stocks have historically outperformed large-cap stocks during election years.

An interesting observation is the sharp pullback in small caps that has historically occurred from mid-September through the end of October, before the November elections.

Conclusion:

The weight of the technical evidence, as illustrated in this month's *Informed Investor* publication, suggests a rotation toward SMID-cap stocks is underway. We believe this rotation results from a changing Fed policy, interest rates, and a normalizing yield curve. While the economic outlook remains somewhat hazy, the major averages remain technically constructive.

We anticipate equity markets will remain choppy ahead of the November U.S. Presidential election. SMID caps have historically outperformed large caps in the second half of the fourth year of a Presidential cycle. Hence, we are willing to "roll with the changes" and look "down-cap" to "RUSSELL Up Some Winners." We maintain our year-end SPX price objective of 5,800.

Major Averages Performance | After the First Rate Cut:

The table below shows the three-month forward returns after the Federal Reserve's first rate cut after a tightening cycle since 1989.

On average, the Russell Value Index outperformed over the next three months, with a 67% positivity rate. It was followed by strength in the S&P 500 and Russell Growth Index. The Nasdaq Composite was a notable laggard with a small 0.25% loss.

From a median return perspective, growth, value, and the S&P indices outperformed three months after the first rate cut, while Mid-caps lagged.

PSC Sector Performance | After the First Rate Cut:

The table below shows that most sectors performed better three months after the Federal Reserve's first rate cut after a tightening cycle since 1989.

Utilities and Staples were particularly strong, followed by Cyclicals with at least a 67% positivity rate.

Energy, Technology, and Communications were often laggards three months after the first rate cut.

The table below shows how our PSC sectors performed after the yield curve rose from negative to positive.

In the short term (4 to 13 weeks), the average return of *Transportation*, *Staples, and Healthcare* have performed best, while *Financials* and *Energy* underperformed.

The **Technology**, **Healthcare**, **and Services** sectors performed well over the intermediate-to-long term (26 to 52 weeks), while the **Energy**, **Financials**, **and Utilities** underperformed.

SPX | Historical Percentage from a New High When Fed Has Cuts Rates:

Our research showed that since 1989, the SPX has been approximately 5% to 7% below its all-time high when the Federal Reserve made its first rate cut after a tightening cycle. Also, the median number of days to recover to a new high has been 69 days. Thus, any near-term seasonal weakness should be considered a buying opportunity.

SP	SPX % of Distance From New High When Fed Cuts Rates (1989-YTD)										
One Day Before the First Rate Cut Date	Price	All-time Highs	% of Distance From New Highs	# of Days to Recover New Highs

Major Asset Class Seasonality Analysis | September:

From a macro perspective, our research showed that **WTI Crude Oil** and **Gold** outperformed while equities historically declined during September.

Among stock indices, SMID-caps typically performed better than Large-caps (SPX) during September.

Major Asset Class September Month Seasonality											
Stat Metrics	SPX (1928-2023)	MID (1991-2023)	RTY (1979-2023)	DXY (1967-2023)	10-year Yield (1962-2023)	Gold (1971-2023)	WTIC (1983-2023)

DJIA | Election Year Analysis:

Historically, September is the worst-performing month of the year. <u>However, in Election years when there is a</u> <u>Democratic incumbent, there tends to be more of a choppy uptrend leading up to November</u>. Therefore, we suspect the next several weeks could consist of a modest backing and filling underpinned with a bullish tone.

Voting With Your Wallet:

It has been said that when people vote, they often "vote with their wallets." In other words, they choose the candidate who will be best for the economy, their investments, and their spending habits.

We analyzed the returns of the DJIA during all election years since 1900. We found that when returns are positive three months before an election, the incumbent party usually is re-elected (77.42% accuracy).

The table below highlights the results of our analysis and the success rate of using market returns to predict presidential elections.

Election Year	DJIA % Change (-3 M)	Recessionary Env.	Winning Party	Incumbent/Non-Incumbent	As Predicte
1900	3.94%	Yes	Republican	Incumbent	Yes
1904	20.93%	No	Republican	Incumbent	Yes
1908	3.21%	No	Republican	Incumbent	Yes
1912	1.11%	No	Democratic	Non-Incumbent	No
1916	17.21%	No	Democratic	Incumbent	Yes
1920	-2.05%	Yes	Republican	Non-Incumbent	Yes

2020	0.28%	No	Democratic	Non-Incumbent	No

Price Action Into & Out of an Election – Since 1900:

This study analyzes the performance of the DJIA index going into and out of an election on a +/- 3-month basis. In summary:

- Incumbent (Republican and Democrat): Average returns going into an election usually start strong in August, followed by a flat/negative return in the next two months. November is generally a comeback month.
- Incumbent (Republican): After a strong August, average returns going into an election (-1/-2 months particularly) are negative. Once the election is finalized, November is generally a comeback month.
- Incumbent (Democrat): Average returns going into an election (-1/-2/-3 months) are positive, but November posted relatively small average returns, around 0.5% after the election.
- From a performance perspective, the highest average returns are observed during August, followed by November (suggesting a positive environment for stocks after the election results).

Recession Study I Announcement vs. Declaration:

In the studies presented on the following two pages, we show the National Bureau of Economic Research (NBER) has announced that a recession began (on average) approximately eight months from their backdated declaration start dates and announced a recession has ended (on average) about fifteen months from their backdated declaration end dates.

Our research also showed that the average length of the past fifteen recessions (since 1929) declared by the NBER was approximately thirteen months.

In addition, we analyzed which sectors from our unweighted MicroGroups outperformed and underperformed during each declared recession since 1969. The Healthcare sector outperformed three times during the last eight recessions. *Staples* outperformed on two occasions. The *Energy* sector underperformed three times, and the *Communications* group underperformed twice.

Forward returns for the S&P 500 after a recession's declared end date showed average returns of 4.9%, 12.4%, 14.4%, 17.5%, and 20.3% over the next 4/13/26/52/104 weeks. The mean return was 2.5%, 6.9%, 12.7%, 12.1%, and 20.4% during those same periods. Positivity of those following weeks after the declared end date of the recession was greater than 73%.

The table shown below highlights the forward returns of the S&P 500 index, starting from 1980 when the National Bureau of Economics (NBER) began to announce a declared start date for recessions.

On average, the NBER has backdated the declaration of the start of a recession by approximately eight months from its actual announcement date. From its announcement date, forward returns for the S&P have averaged 1%, -0.26%, 6.17%, and 15.44% over the next 4/13/26/52 weeks.

claration Start Date" = the date the NBER back-dated as the start of the recession "Declaration End Date" = the date the NBER back-dated as the end of the recession

In conclusion, our research shows that 10 of the 15 recessions since 1929 have lasted less than one year, the average being 13 months. Forward returns on the SPX have been higher 26 weeks after the announcement of a recession 67% of the time. The U.S. Dollar has generally strengthened, and the benchmark 10-year bond yield has initially fallen but quickly recovered 26 weeks later.

Top-Down Analysis | Index & Sector Performance YTD

From a performance perspective, the S&P 100, S&P 500, *NASDAQ 100*, and NASDAQ Composite have led equities higher, advancing at least 16.0% YTD.

The *Dow Industrials* index is up 9.8% YTD.

The Value line and AMEX are at the bottom of the index leaderboard, up at least 3.3% YTD.

Six of the twelve Piper Sandler sectors were positive YTD on an unweighted basis (equally weighted).

Utilities have outperformed with 9.9% gain.

Energy and *Technology* are the worst performing sectors YTD, with at least - 4.4% decline.

On a weighted sector basis (market-cap weighted), *Communications/Media* and *Technology* are leading with at least a 17.5% return YTD.

Note the performance deltas between select unweighted and weighted sectors. For example, the weighted or large-cap focused *Technology* sector was up 24.5%, while its unweighted counterpart had declined -5.3%. The 29.8% performance gap illustrates why we look at our sector work on both an Unwtd and Wtd basis.

Top-Down Analysis | Best & Worst Industry Groups YTD

The table below highlights the best/worst-performing MicroGroups (MGs) YTD. On the leadership side (left), MGs are the most prevalent in the *Industrials* and *Services* sectors. *Technology* sector MG comprised most of the YTD laggards list.

Election Year Analysis | Presidential Cycle: S&P 500 Fourth-Year Maximum Drawdowns

Many investors have asked about the magnitude of pullbacks/corrections in the S&P 500 (SPX) Index during Presidential Election years. This study analyzed the SPX's election-year performance and identified maximum drawdowns and annual returns. We then calculated the forward returns after each maximum drawdown to provide perspective on the recovery period.

The bar chart to the left breaks down the average annual returns and maximum drawdowns observed within the fourth year of the Presidential Cycle.

Historically, annual SPX returns have averaged 7.5%, with yearly maximum average drawdowns of -15.0% and a median drawdown of -9%.

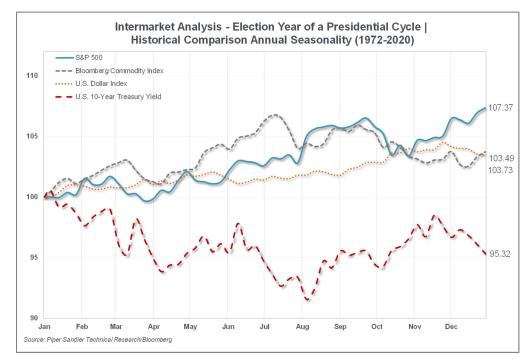

Fourth Year of a Presidential Cycle S&P 500 Returns Following a Maximum Drawdown (1928-2020)

The table to the left shows the SPX's forward performance after a maximum drawdown was recorded (during the fourth year of the Presidential Cycle).

Our research shows that after a maximum drawdown was observed, the index posted positive returns of 7.3% over the next four weeks.

We also found that the SPX generated average returns of 13.2% and 15.3% over the following 13- and 26-week periods, respectively.

Election Years | Intermarket Analysis (1972-2020)

The chart on the left compares the average progression of different asset classes during election years since 1972.

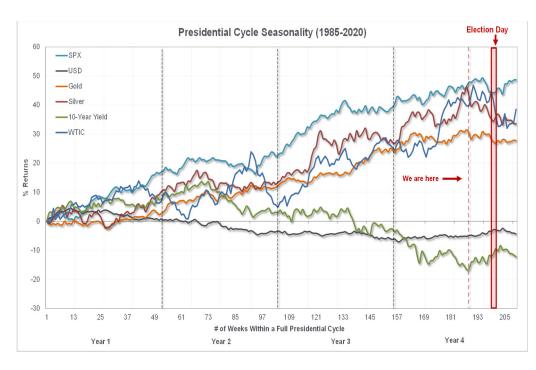

Typically, <u>equities (S&P 500)</u> have outperformed with a 7.4% return.

<u>Commodities (BCI)</u> outperformed during the first half of the year but tend to retreat in the second half.

The <u>U.S. Dollar has generally seen</u> a moderate rise throughout most election years.

The benchmark <u>10-year U.S.</u> <u>Treasury yield</u> historically decreased during the first eight months of election years, and then recovered some of those losses during late Q2 and early Q3, but slipped again into year-end.

Intermarket Seasonality during a 4-year Presidential Cycle

The chart on the left displays the average progression of various asset classes throughout a 4-year Presidential cycle since 1985.

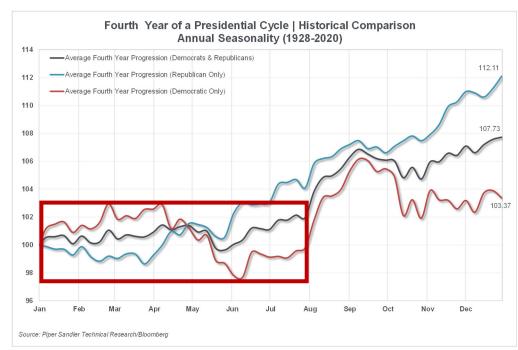

In the first half of Year 4, equities are predicted to outperform other asset classes. This will be followed by advances in Commodities (Silver, Gold, and Oil, etc).

During the second half of Year 4, Commodities are likely to retreat while equities maintain their relative strength.

Furthermore, during Year 4 of a Presidential cycle, the U.S. Dollar tends to gradually rise until after Election Day.

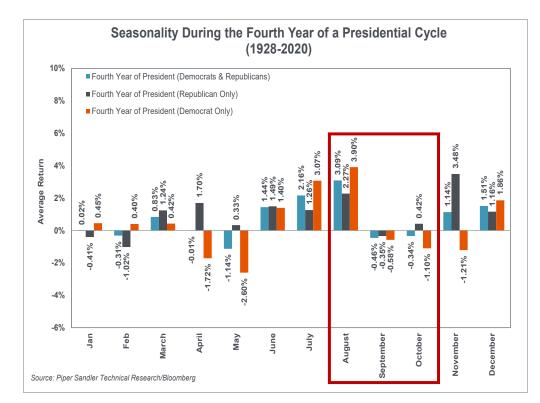

The benchmark 10-year UST yield has typically declined in the first half of the year and then rebounded around the November election.

Fourth (Election) Year of a Presidential Cycle by Political Party

The chart on the left displays the average S&P progression during the fourth year of the presidential cycle. It covers performance for all years, including those under Democratic and Republican presidents.

Since 1928, the S&P 500 has averaged 3.4% during Democratic-led years. Q1 has often outperformed the historical average but underperformed the rest of the year, especially during Q2 and Q4.

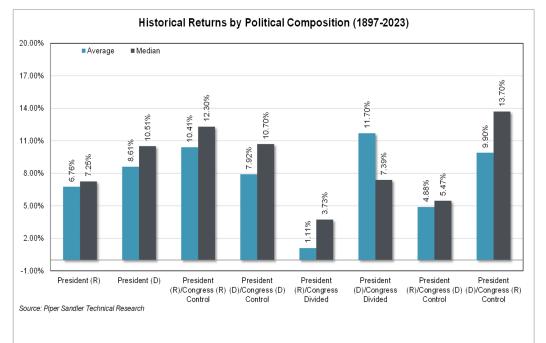

The table to the left compares the historical monthly returns during the fourth year of each party's presidency.

The greatest returns occurred between the June and August timeframe, especially under a Democratic presidency.

However, some of the worst returns also occurred under a Democratic presidency, especially in the April-May and October-November timeframes.

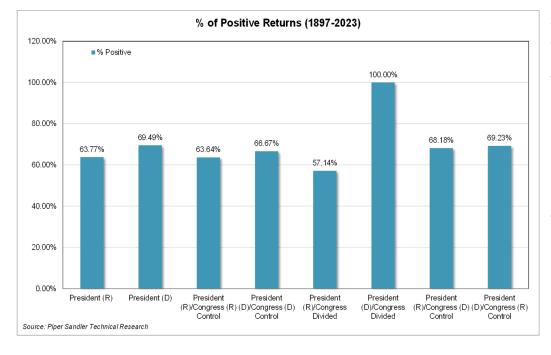

Historical Returns by Political Composition

The stock market experienced its strongest median returns during both a Democrat and Republican presidency with a Republican-controlled Congress.

On the other hand, the market's performance underperformed during a Republican presidency in combination with either a divided or Democratcontrolled Congress.

Conclusion—The party that controls Congress has had a significant impact on the stock market's performance. Historically, a Republicancontrolled Congress produced the strongest returns.

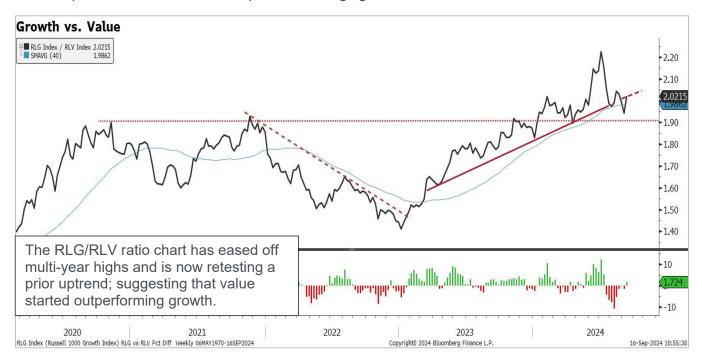

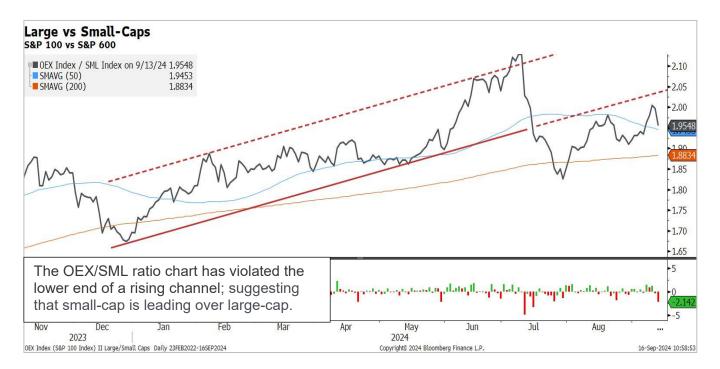

The chart on the left shows the positivity rate of stock returns categorized by which political party controlled the Presidency and Congress.

In sum, the stock market experienced a 100% positivity when there was a Democrat president paired with a divided-Congress.

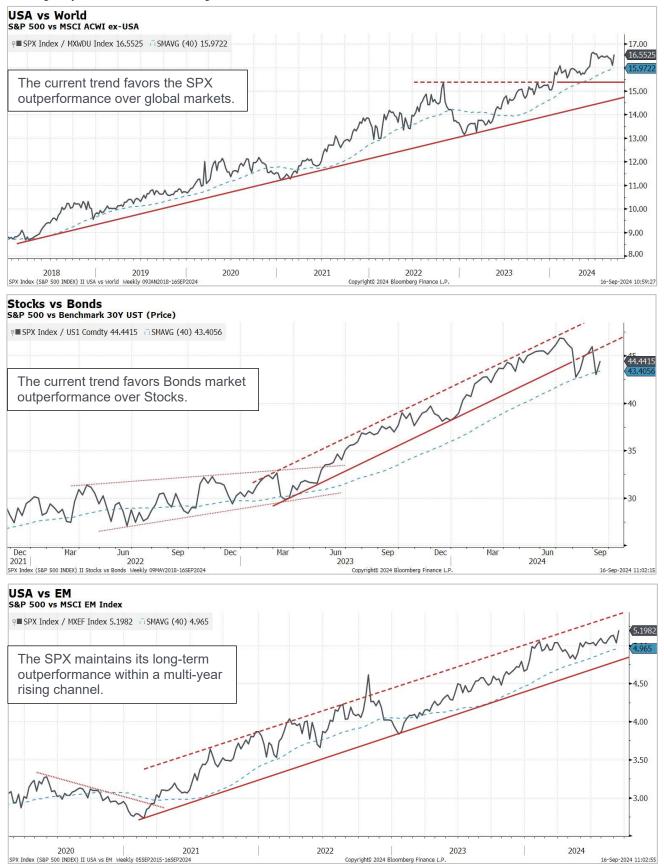

Market Style | Ratio Chart Analysis

Ratio charts provide a visually transparent snapshot of relative performance between two time-series data sets. They are one of the simplest and most powerful ways to analyze investment style and macro-level trends. The following ratio charts provide an overview of current market trends related to investment style, market cap, and relative performance across developed and emerging markets.

Market Style | Ratio Chart Analysis

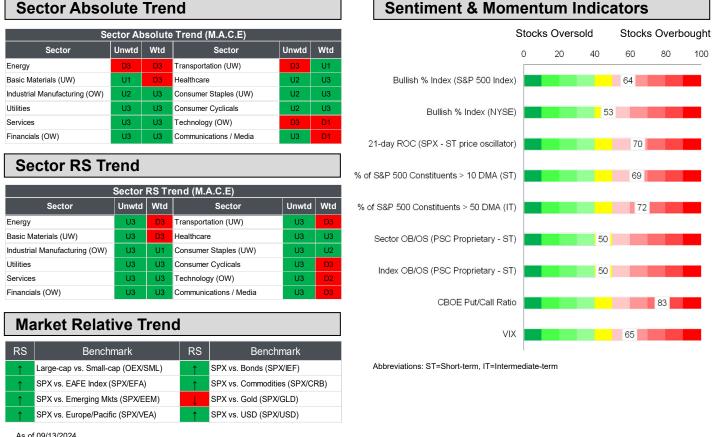

Trend Analysis | Technical Indicator Snapshot

The tables below provide an overview of the absolute and relative strength sector trends based on our Moving Average Cycle Evaluation (MACE). As a reminder, MACE uses the relative position of short-term (S), intermediate-term (M), and longer-term (L) moving averages to classify a current trend. Based on the position of each moving average, trends are broken down into the following categories:

- Uptrends: U1=possible uptrend | U2=confirmed uptrend | U3=well-defined uptrend
- Downtrends: D1=possible downtrend | D2=confirmed downtrend | D3=well-defined downtrend

We also included a snapshot of several other sentiment and momentum indicators we closely monitor.

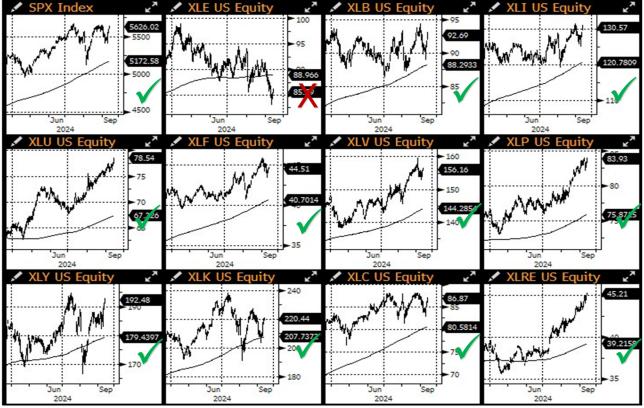

As of 09/13/2024

SUMMARY

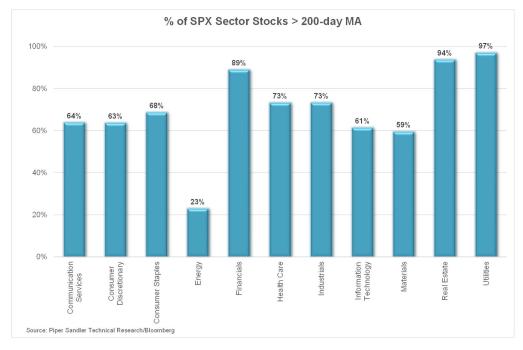

- Size Matters: Based on our MACE trend model, absolute Wtd sector trends add to the evidence of largecap outperformance. For example, 7 out of 12 Wtd sectors remain in a well-defined uptrend (U3), while only 4 of 12 Unwtd sectors have the same rating.
- Asset Classes: The S&P 500 is outperforming bonds, Emerging markets, Europe/Pacific, EAFE, commodities (except Gold) and the U.S. Dollar. Large-cap stocks are outperforming small-cap stocks.
- Sentiment & Momentum: The CBOE put/call ratio has violated the 50-/200-day MAs, which indicates a riskon backdrop.
- Bullish Percent: The Bullish Percent Index has improved. Bullish Percent tracks how many stocks are bullish within an index based on point and figure analysis (P&F). The current percentage of P&F buy signals for the S&P 500 and NYSE Composite is 64% and 53%, respectively.

S&P 500 | Sector Stocks > 200-day SMA

The chart montage below highlights the S&P sector's price compared to its 200-day SMA. Eleven sectors are above their 200-day MA as of September 13, 2024.

Source: Piper Sandler Technical Research/Bloomberg

The table to the left shows the percentage of stocks in each SPX sector that are above their 200-day MA.

Utilities have the highest percentages at 97%, followed by *Real Estate* and *Financials* with at least 89%.

Energy has the fewest percentage of stocks above their 200-day MA.

Key Risks to Our Market Narrative and Equity Markets

As the end of summer draws near, equity markets could enter a backing and filling phase (or *High-Level Trading Range*) over the next several weeks ahead of the U.S. Presidential election. While we anticipate SMID-cap and value stocks to outperform into year-end, there are several key risks listed below that could disrupt our bullish market outlook:

- 1. <u>Elevated Market Volatility:</u> Our primary measure of market breadth, the 40-Week Technique, has been volatile, flipping back and forth between buy and sell signals over several months. Given the changing market leadership, we suspect the *40-Week Technique* will be noisy for several quarters.
- Yield Curve Normalization/Economic Recession: Historically, yield curve inversions have warned of pending economic recessions. The benchmark U.S. bond 10/2-year spread recently normalized after being inverted for over two years. Our research showed that recessions are often declared several months after the yield curve normalizes.
- <u>Rate Cut Inadequacy</u>: As the Federal Reserve continues to engineer a soft economic landing, it walks a fine line between cutting rates too much/too fast and not enough/too slow, thus potentially leading to a hard landing or recession.
- 4. <u>A Higher Unemployment Rate</u>: The U.S. unemployment rate has risen above 4% for the first time since November 2021. While this is an incentive for the Fed to cut rates eventually, it will likely affect consumer spending habits and thus lead to slower economic growth, lower corporate profits, and a decline in stock prices.
- 5. <u>A Slowdown in Earnings Growth</u>: Equity markets rise based on higher top and bottom-line corporate growth expectations. Lower revenue and sales guidance will likely stymie an advance in stock prices.
- <u>Change in Leadership/Unwinding Concentration Risk:</u> The S&P 500 remains heavily concentrated in mega-cap stocks, comprising about 27% of the index. A sharp decline in the Mag Seven stocks could disproportionately impact the popular market indices (DJIA, SPX, CCMP, MID, and RUT).
- Sticky Inflation/Higher For Longer Interest Rates: The Federal Reserve's historically aggressive rate hikes a year ago and the efforts to reach its 2% inflation target have essentially been accomplished. Should inflation start to trend higher again, the Fed would need to raise rates or slow the rate cuts.
- 8. Geopolitical Risk:
 - a. The Israel-Hamas conflict keeps fears elevated around the Eastern Mediterranean as turmoil sporadically scatters to other countries in the region.
 - b. The Russia-Ukraine war remains a destabilizing geopolitical factor with no resolution in sight.
 - c. Tensions between the U.S. and China remain elevated, especially regarding tariffs and Taiwan's sovereignty.

CONCLUSION

The stock market will likely be volatile for the next several weeks leading into the November election. However, we expect SMID-caps to outperform Large-caps as Fed rate cuts will likely mark the start of a new liquidity cycle for investors. We maintain our year-end S&P 500 price objective at 5,800.

• For the week ending 9/11/2024, U.S. equity funds saw an estimated net outflow of \$7.8 billion, while money markets and bonds saw estimated net inflows of \$18 billion and \$4.7 billion, respectively.

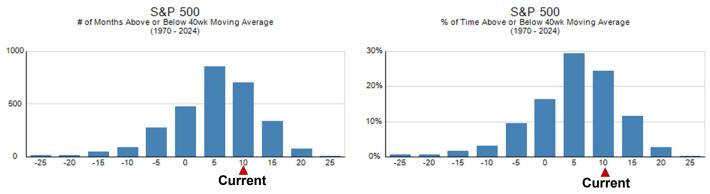

• Excluding ETFs, domestic equity and bond funds saw outflows while money markets reported an inflow.

- For only ETFs, equities had a modest inflow of \$514 million while bonds had a big inflow of \$7.5 billion.
- Money Markets reported a moderate estimated inflow of \$18.1 billion, or 0.32% of its Total Net Assets. Excluding ETFs, Money Markets surpassed Equities net assets and is more than double Bonds assets.

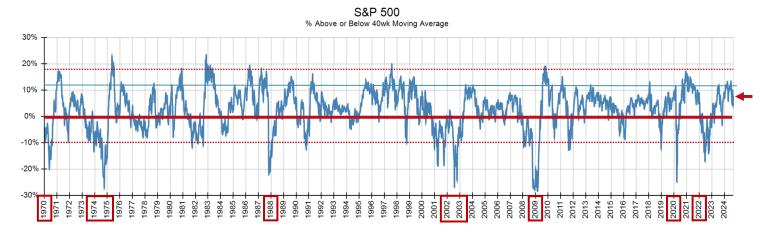

S&P 500 Price Relative to the 40-week MA:

The S&P 500 has traded above the 40-week MA for the last ten months. Historically, the index has traded above the 40-week MA for an average timeframe of around five months.

The S&P 500 trades at an 8% premium to its 40-week MA (shown in the chart below), which is above the historical average 5% premium that the index has traded over the 40-week MA since 1970.

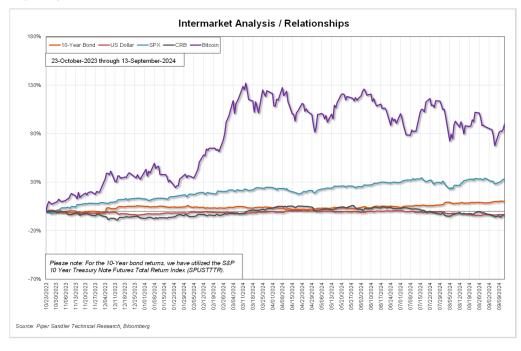

MACE Sector Analysis: Currently, 72% of stocks within the S&P 500 are trading in some form of a MACE-defined uptrend (U1, U2, or U3 rating), as opposed to 65% at the time of our last publication on 08/07/2024.

Intermarket Analysis:

- Commodities (CRB) have declined for several months but are still up 4% year-to-date. WTI Crude Oil has dropped to a 52-week new low below \$70/barrel, while Gold has risen to a new record high of \$2617/oz.
- The DJIA and S&P 500 have climbed to a new all-time high, up approximately 10% and 18% year-to-date. The Nasdaq is up 18% YTD but much slower to recover from its August correction. SMID-caps confirmed support at their 200-day MAs and are expected to outperform into year-end.
- Bond prices are rising to year-to-date highs, with the 10-year UST yield falling toward 3.0%-3.50% support. The U.S. Dollar (DXY) has weakened to 52-week new lows, with next support near 101.

U.S. Dollar Index & S&P 500 Correlation:

- The 40-day correlation between the U.S. Dollar and the S&P 500 index has been slightly positive since August.
- Slower economic data and higher unemployment have increased expectations that the Fed will start cutting rates, weakening the U.S. Dollar.
- We expect the positive relationship between the dollar and equities to remain near neutral for the coming months as prices back and fill at longterm support around the 100level.

• Fixed Income Market:

- The Federal Reserve is expected to start cutting rates based on slowing economic growth, which has caused the 10/2 yield curve to normalize for the first time in over two years. Historically, a recession has occurred several months after the yield curve normalized.
- As bonds rise and yields decline, the benchmark 10-year UST yield has fallen to a 52-week new low at 3.6%. However, from a longer-term perspective, we view this as a normal retracement after a parabolic advance to 5%. Look for new support to be established in the coming months, around 3.0% to 3.50%.

1995-1999

2000-2004

1990-1994

1980-1984

1985-1989

2005-2009

2010-2014

2015-2019

2020-2024

In August, the 10-year bond yield violated a long-term uptrend and has continued sliding toward next support near 3.50%. Below that, the next support is at 3.25%. According to Bloomberg's Fed fund futures, the probability of at least a 25-basis point rate cut is 100% at the September FOMC meeting.

The normalization of the 10/2's inverted yield curve has historically preceded the NBER's declaration of a recession by several months.

Investors are eager to lock in high bond interest rates as the Fed is expected to begin its first rate-cutting cycle since March 2020.

From a longer-term perspective, yields have reversed a secular downtrend off the '81 highs. The higher high above 3.25% ('18 highs) also validated the breakout from the multi-decade bottom, implying a new secular uptrend has begun. However, given the unsustainable parabolic advance to 5%, rates will likely retrace to prior resistance/new support around 3.00% to 3.50%—a decisive break below that would imply the economy is in more serious trouble.

FX Market:

- Investors' expectations remain high for at least a 25-basis point cut in the Fed funds rate at the upcoming FOMC meetings, lowering the rate from 5.25%-5.50% to back below 5.0% by year-end.
- The *U.S. Dollar* has fallen to 52-week new lows on the prospect of lower interest rates, driven by the evidence of slowing economic growth, higher unemployment, and the unwinding of global carry trades.
- The *Japanese Yen* reversed a multi-year downtrend against the U.S. dollar as the carry trade unwound following the Bank of Japan's decision to raise interest rates to 0.25%—the highest level since 2008.

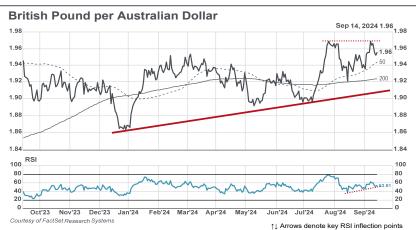

The dollar is consolidating above support near 100.30; recent death crossover between the 50-/200-day MAs; RSI has rolled over; reduce positions on a violation of support.

The pair is approaching support off the December '23 lows near 140; recent death crossover between the 50-/200-day MAs; RSI has rolled over at the midline; reduce positions on a violation of support.

The pair has pulled back from overhead resistance near 1.97; back above the 50-/200-day MAs (golden crossover); RSI has eased to the midline; add to positions on a confirmed topside breakout.

-20

- Most commodities have pulled back from their year-to-date highs over the last few months, indicating that inflationary pressures have eased. The CRB index has fallen 11% from its YTD high, with a recent 50-/200-day bearish crossover, to retest the lower end of a two-year channel.
- WTI Crude Oil has broken down under key \$70 support to a 52-week new low. The next support below lies near \$62-\$63/barrel. Gold futures reached a new all-time high above \$2,600/oz, benefiting from a weaker U.S. Dollar and ongoing geopolitical turmoil.

Feb'24 Mar'24 Apr'24 May'24 Jun'24 Jul'24 Aug'24 Sep'24

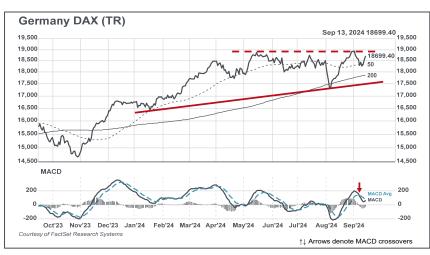

The CRB Index is retesting the lower end of a rising price channel; recent death crossover between the 50-/200day MAs; reduce positions on a violation of support.

WTI crude oil is consolidating around support off the December '23 lows; recent death crossover between the 50-/200-day MAs; reduce positions on a violation of support.

Gold has broken out from a bullish pennant formation; above the rising 50-/200-day MAs; recent buy signal in MACD; add to positions.

Foreign Markets:

- Due to currency and interest rate changes, the performance of global equity markets has been bifurcated.
- While most European bourses have recovered from their August corrections, Japan's Nikkei and TOPIX have weakened below their 200-day MAs after correcting sharply due to the Yen carry trade unwinding.
- India's Nifty 50 index displays relative strength among global equity markets, climbing into new high territory and nearing the upper end of a multi-month rising price channel.

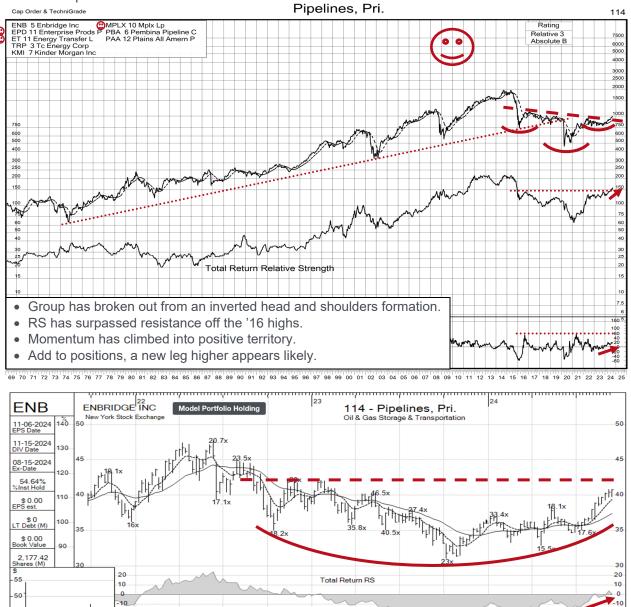

The index is approaching resistance off the May '24 highs; back above the 50-/200-day MAs; add to positions on a confirmed topside breakout.

The index has failed at the 50-/200-day MAs; recent sell signal in MACD; reduce positions, a new leg lower appears to be underway.

The index is approaching the upper end of a rising price channel; above the rising 50-/200-day MAs; recent buy signal in MACD; use pullbacks within the price channel to add to positions.

MicroGroup Highlights: This section includes several of our favorite <u>bearish</u> trade ideas in this month's Informed Investor publication.

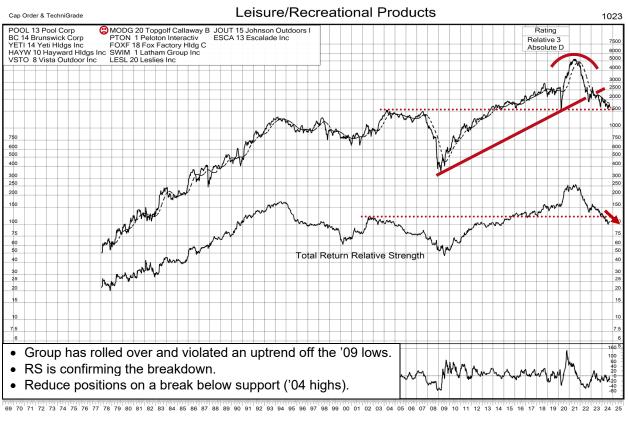

• DINO—Shares are retesting the lower end of an ascending triangle.

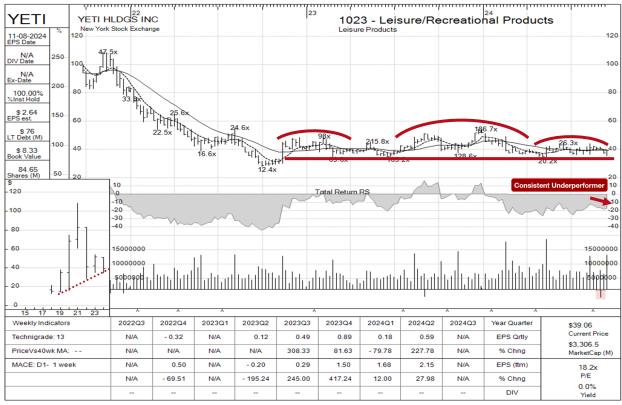

- Below the declining 10-/30-week WMAs.
- Consistent RS underperformer and weak TechniGrade ranking.
- Reduce positions on a break below support.

• AAL—Shares have bounced off the lower end of a declining price channel.

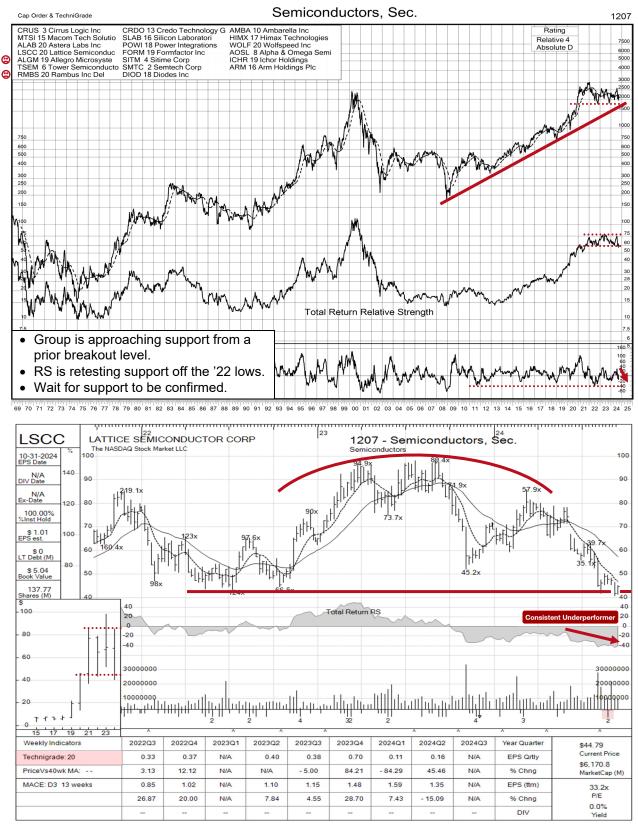

- Below the declining 30-week WMA.
- RS has recovered from oversold levels and weak TechniGrade ranking.
- Use relief rallies to reduce positions.

• YETI—Shares are approaching the neckline of a head and shoulders top formation.

- Back below the 10-/30-week WMAs.
- Consistent RS underperformer and insider selling activity.
- Reduce positions on a break below the neckline.

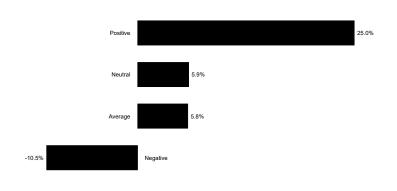

• LSCC—Shares are retesting support off the '22 lows.

- Below the declining 10-/30-week WMAs.
- Consistent RS underperformer and concerning TechniGrade ranking.
- Reduce positions on a violation of support.

Relative & Absolute Ratings:

All the numerical data in this publication is computer-generated, e.g., M.A.C.E, TechniGrade, etc., except for the MicroGroup and Sector Rating System. Each Group and Sector is subjectively rated on a relative and absolute basis, relying on many inputs, including fundamental and technical data. While the allowable relative ratings will be skewed to represent a bell-shaped curve, i.e., 30% outperform, 40% neutral, 30% underperform, the absolute ratings can, in theory, and may in practice, be highly skewed toward a decidedly bullish or bearish position.

UNWEIGHTED RELATIVE RATING -- YTD 2024 YTD — 09/13/24

Relative Ratings:

A numerical relative ranking from two through four signifies projected performance compared to the entire market.

Since the spectrum of securities prices can be said to be normally distributed (a bell curve), it follows that at any given juncture, a full range of performances from worst to best will be available. Thus, when assigning relative ratings, we adhere to these constraints by maintaining guideline allowable percentages for each number as outlined below:

Positives:

2= Outperform the market (30.0 % of MicroGroups)

Neutral:

3= Perform in line with the market (40.0% of MicroGroups)

Negatives:

4= Underperform the market (30.0% of MicroGroups)

Absolute Rating

- A Buy
- B Accumulate on weakness
- C Hold
- **D** Sell on strength
- F Sell

UNWEIGHTED RELATIVE RATING -- CUMULATIVE

TECHNIGRADE

The "*TechniGrade*" concept is simply a numerical way of looking at the relative (comparative) Performance of each Sector, *MicroGroup*, and issue over time. With this concept, the performance of each *MicroGroup* is compared to the performance of the *MicroGroup* universe of nearly 6,000 stocks, known as the "*MicroGroup Index*." This process is then repeated until a ratio has been calculated over the last six-month period that supplies a heavier weighting to the most recent weeks. Based on these computer calculations, a *TechniGrade* rating from 1 (top 5% of performers) to 20 (bottom 5% of performers) is automatically assigned to each *MicroGroup* on an ongoing basis.

Κεγ

TechniGrade

A ranking from 1 (best) to 20 (worst) based on relative performance. Historically Groups with a *TechniGrade* of 1 - 4 give the best performance, but the trend in *TechniGrade* is also important. Read from the right to the left to identify the *TechniGrade* trend.

Research Disclosures

Piper Sandler does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decisions. This report should be read in conjunction with important disclosure information found at the end of this report or at the following site: http://www.pipersandler.com/researchdisclosures.

Piper Sandler research analysts receive compensation that is based, in part, on overall firm revenues, which include investment banking revenues. **Affiliate disclosures**: Piper Sandler is the trade name and registered trademark under which the corporate and investment banking products and services of Piper Sandler Companies and its subsidiaries Piper Sandler & Co. and Piper Sandler Ltd. are marketed. This report has been prepared by Piper Sandler & Co. and/or its affiliate Piper Sandler Ltd. Piper Sandler & Co. is regulated by FINRA, NYSE and the United States Securities and Exchange Commission, and its headquarters are located at 800 Nicollet Mall, Minneapolis, MN 55402. Piper Sandler Ltd. is authorised and regulated by the Financial Conduct Authority, and is located at 6th Floor, 2 Gresham Street, London EC2V 7QP. Disclosures in this section and in the Other Important Information section referencing Piper Sandler include all affiliated entities unless otherwise specified. Piper Sandler's technical and quantitative products are based on different methodologies, may contradict the opinions contained in fundamental research reports, and could impact the price of the subject security. Recommendations based on technical and quantitative analysis are intended for the professional trader, while fundamental opinions are typically suited for the longer-term institutional investor.

Other Important Information: The information in this report is based on data obtained from sources we deem to be reliable; it is not guaranteed as to accuracy and does not purport to be complete. This report is solely for informational purposes and is not intended to be used as the primary basis of investment decisions. Piper Sandler has not assessed the suitability of any security or company for any person. Because of individual client requirements, it is not, and it should not be construed as, advice designed to meet the particular investment needs of any investor. This report is not an offer or the solicitation of an offer to sell or buy any security. Unless otherwise noted, the price of a security mentioned in this report is the most recently available closing market price. Piper Sandler does not maintain a predetermined schedule for publication of research and will not necessarily update this report. Piper Sandler policy generally prohibits research analysts from sending draft research reports to subject companies; however, it should be presumed that the author of this report has had discussions with subject companies to ensure factual accuracy prior to publication, and has had assistance from the companies in conducting diligence, including visits to company sites and meetings with company management and other representatives. Notice to customers: This material is not directed to, or intended for distribution to or use by, any person or entity if Piper Sandler is prohibited or restricted by any legislation or regulation in any jurisdiction from making it available to such person or entity. Customers in any of the jurisdictions where Piper Sandler and its affiliates do business who wish to effect a transaction in the securities discussed in this report should contact their local Piper Sandler representative, or as otherwise noted below. Canada: Piper Sandler & Co. is not registered as a dealer in Canada and relies on the "international dealer exemption" set forth in National Instrument 31-103 - Registration Requirements, Exemptions and Ongoing Registrant Obligations of the Canadian Securities Administrators. This research report has not been prepared in accordance with the disclosure requirements of Dealer Member Rule 3400 - Research Restrictions and Disclosure Requirements of the Investment Industry Regulatory Organization of Canada. Europe: This material is for the use of intended recipients only and only for distribution to professional and institutional investors, i.e. persons who are authorised persons or exempted persons within the meaning of the Financial Services and Markets Act 2000 of the United Kingdom, or persons who have been categorised by Piper Sandler Ltd. as professional clients under the rules of the Financial Conduct Authority. United States: This report is distributed in the United States by Piper Sandler & Co., member SIPC, FINRA and NYSE, Inc., which accepts responsibility for its contents. The securities described in this report may not have been registered under the U.S. Securities Act of 1933 and, in such case, may not be offered or sold in the United States or to U.S. persons unless they have been so registered, or an exemption from the registration requirements is available.

This report is produced for the use of Piper Sandler customers and may not be reproduced, re-distributed or passed to any other person or published in whole or in part for any purpose without the prior consent of Piper Sandler & Co. Additional information is available upon request. Copyright 2024 Piper Sandler. All rights reserved.

Time of dissemination: 17 September 2024 21:32EDT.
